NATIONAL REGISTER OF HISTORIC PLACES REGISTRATION FORM

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in How to Complete the National Register of Historic Places Registration Form (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

Historic name: Purcellville Historic District (DHR #286-5001)
other names/site number: _____

2. Location

street & number Roughly bounded by W&OD Trail, S. 32nd St., West F & East G Sts., and Maple Ave. N/A not for publication
city or town Purcellville _____ vicinity
state Virginia code VA county Loudoun code 107 Zip 20132

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act of 1986, as amended, I hereby certify that this X nomination
____ request for determination of eligibility meets the documentation standards for registering properties in the National Register of
Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property X
meets ____ does not meet the National Register Criteria. I recommend that this property be considered significant ____ nationally ____
statewide X locally. (____ See continuation sheet for additional comments.)

Signature of certifying official Date
Virginia Department of Historic Resources
State or Federal agency and bureau

In my opinion, the property X meets ____ does not meet the National Register criteria. (____ See continuation sheet for additional
comments.)

Signature of commenting or other official Date

State or Federal agency and bureau

4. National Park Service Certification

I, hereby certify that this property is:

- ____ entered in the National Register
____ See continuation sheet.
____ determined eligible for the
National Register
____ See continuation sheet.
____ determined not eligible for the National Register
____ removed from the National Register
____ other (explain): _____

Signature of Keeper

Date of Action _____

U.S. Department of the Interior
National Park Service

Purcellville Historic District
Loudoun County, Virginia

5. Classification

Ownership of Property (Check as many boxes as apply)

Narrative Description (Describe the historic and current condition of the property on one or more continuation sheets.)

8. Statement of Significance

Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- ☒ **A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
☐ **B** Property is associated with the lives of persons significant in our past.
☒ **C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
☐ **D** Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.)

- ☐ **A** owned by a religious institution or used for religious purposes.
☐ **B** removed from its original location.
☐ **C** a birthplace or a grave.
☐ **D** a cemetery.
☐ **E** a reconstructed building, object or structure.
☐ **F** a commemorative property.
☐ **G** less than 50 years of age or achieved significance within the past 50 years.

Continuation Sheet

Purcellville Historic District
Loudoun County, Virginia

Section 7 Page 1

7. Summary Description

Located in western Loudoun County, the town of Purcellville, Virginia stands near the foothills of the Blue Ridge Mountains in the center of the Loudoun Valley. The town maintains a diverse mix of residential, commercial, religious, institutional, and industrial properties that characterized it during its historic period of significance which extends from 1830 to 1957.

Though a handful of buildings remain from its earliest period of development, most were built during the town's late-19th- and early-20th-century boom period. Seventy-two percent of the 466 properties included in the district contain main buildings that contribute to its historic and architectural significance. All told, the district encompasses 835 main and secondary buildings; of these 480 contribute. The majority of the 352 non-contributing buildings are outbuildings or other secondary resources. In addition to buildings, the district includes eight contributing and eleven non-contributing structures.

The Purcellville Historic District, which encompasses 293 acres within the corporate limits of the town, contains a small, but dense commercial core surrounded by less dense residential and industrial neighborhoods. The town is traversed by three major roads that extend beyond the town and that historically connected Purcellville to important regional transportation networks. The right-of-way of the former Washington & Old Dominion Railroad (W&OD), which played a central role in the town's economic growth, extends along the district's northern edge. The collection of buildings found within the Purcellville Historic District represents a range of architectural styles popular during the 19th and 20th centuries in rural Virginia. The majority exhibit simple, traditional building forms with limited stylistic detailing; however, several examples of high-style architecture are present. The commercial and industrial buildings are mainly constructed of brick or concrete block; institutional architecture ranges from substantial stone and brick churches to simple frame school buildings. Residential buildings are the most numerous building type in the district and display the widest range of styles and materials, though the majority is of frame construction.

Continuation Sheet

Purcellville Historic District
Loudoun County, Virginia

Section 7 Page 2

Detailed Description

Setting/Landscape

Located approximately ten miles west of the Loudoun County seat of Leesburg, the town of Purcellville stands between the Catoctin and Blue Ridge Mountains in the Loudoun Valley, which is part of Virginia's Northern Piedmont region. Standing at an elevation of 576 feet above sea level, the town occupies a relatively level plain situated amongst the rolling Piedmont landscape of western Loudoun County. The area that immediately surrounds the historic district limits is rapidly suburbanizing, while the areas outside the town remain mainly rural in character. The town's southern boundary abuts Goose Creek (Rural) Historic District (listed on the National Register of Historic Places, 11-14-1982).

The district is generally bounded by South Maple Avenue (Route 722) on the east, South 32nd Street (Route 690) on the west, the former W&OD right-of-way on the north, and East G Street and South Nursery Avenue on the south. Main Street (Business Route 7), North 21st Street, and South 20th Street essentially divide the historic district into quadrants. Main Street, which originated in 1835 as the Leesburg-Snicker's Gap Turnpike, runs east-west through the district and extends east to Leesburg and west to the Blue Ridge Mountains and beyond into the Shenandoah Valley. It divides the town into northern and southern sectors. North 21st Street extends north from Main Street and continues outside the town limits as Hillsboro Road. It, along with South 20th Street, acts as the dividing line between the east and west sides of town. South 20th Street extends south from Main Street past the town limits where it becomes Telegraph Springs Road.

Main Street, Purcellville's central avenue, is a 50-foot-wide, paved right of way that runs the town's length and is lined on both sides by concrete sidewalks and a mix of residences, churches, and commercial buildings. Although East Main Street has lost most of its street trees, many mature shade trees still line West Main Street's residential district. Overhead electrical wires strung on poles extend along the north side of Main Street. Most of the other major roads that run through Purcellville consist of 30- to 40-foot-wide paved rights of way. While some areas feature sidewalks on one or both sides, most main and secondary roads do not include walkways. Except along West Main Street, formal plantings of rows of street trees do not exist. Most street names have changed at least once since the 1930s; among the main thoroughfares, Main Street,

National Park Service**

**National Register of Historic Places
Continuation Sheet**

**Purcellville Historic District
Loudoun County, Virginia**

Section 7 **Page** 3

South Nursery Avenue, and South Maple Avenue are the only roadways that retain their historic names. The 1933 Sanborn Fire Insurance Map of Purcellville designates North 21st Street as Depot Street and South 12th Street as Hatchers Lane. In addition, the 1933 Sanborn map shows a street known as Railroad Street that once straddled the railroad tracks at the north edge of town; this street no longer exists.¹

The district incorporates only limited public open space. At the center of town, the intersection of South Nursery Avenue, South 20th Street, and Main Street creates a roughly triangular-shaped island that contains a flag pole, an evergreen tree, and signage. The roadways surrounding the island form a makeshift circle that is known as the “Teardrop.” Recreational areas open to the public exist on the south side of town: one on the Bush Meeting Tabernacle property at 250 South Nursery Avenue (286-5001-0234)² and one on the grounds of the former Purcellville School at 320 West School Street (286-5001-0551). The former school currently houses a community center and the grounds include a playground and sports fields. The former Tabernacle historically hosted entertainments for the town. Now known as Fireman’s Field, it has long been used for sporting events and local fairs; today Fireman’s Field houses two baseball fields, picnic facilities, and other sports facilities.

Neighborhoods

The town of Purcellville comprises a number of distinct neighborhoods that resemble modern zoned districts. From the late 19th through the mid-20th centuries, the area south of Main Street developed as a residential district; its oldest houses stand on the south side of East Main Street near the center of town. The historic commercial center is located on either side of North 21st Street, between Main Street and the former W&OD passenger and freight depot. A historically industrial district straddles the former W&OD right of way at the north end of town and extends into the area behind the commercial storefronts that line the east side of North 21st Street. The remainder of the town’s streets are populated primarily by residences.

There are several distinct residential neighborhoods within the Purcellville Historic District. The larger, more elaborate houses are generally grouped together at higher elevations and along main thoroughfares such as Main Street, South 32nd Street, and portions of South Maple Avenue. More modest, mainly frame residences, including many built during the early to mid-20th century, stand along the streets that extend north from Main Street, along the cross streets in the southwestern quadrant of town, on South 20th Street, and along South 11th and 12th Streets. A

Loudoun County, Virginia**

Section 7 Page 4

historically African-American neighborhood occupies the south-central section of town. It is centered on East G Street and South 12th Street and features mainly frame one- and two-story residences. According to local informants, East G Street was once known informally as “the Color Line” or “Colored Lane” since it segregated the black residential district from Purcellville’s white neighborhoods.³

Purcellville’s historic residential neighborhoods encompass a wide variety of ages, forms, and styles in its residential building stock. Most houses occupy relatively small town lots that range from one-quarter acre to two acres in size. While building setbacks vary greatly throughout the district, in the residential areas they generally range from zero to 40 feet. The exception is along West Main Street, where a number of substantial and architecturally sophisticated houses stand; here setbacks are deeper, ranging from 50 to 75 feet. Mature trees and ornamental plantings adorn many of the town’s residential lots and a substantial number of residential lots incorporate wood, stone, or decorative concrete block fences, retaining walls, and gate posts.

Purcellville’s main commercial core occupies the central portion of the town. The densest commercial development occurred between 1915 and 1940 along both sides of North 21st Street between Main Street on the south and the right of way of the former W&OD Railroad on the north. The commercial district extends approximately one-half block east and west on Main Street on either side of its intersection with North 21st Street. Because of three major fires that destroyed much of the commercial core of the town in 1900 and 1914, the vast majority of the existing commercial buildings post-date 1914 and are constructed of fire-proof materials, including brick and formed concrete block.⁴ The district retains a one-block-long continuous row of historic commercial buildings which generally stand on the front lot line without substantial setbacks. Along the east side of North 21st Street and on the north side of East Main Street, the buildings are attached and form a continuous block. In other areas, the buildings are semi-detached or freestanding. Concrete sidewalks run along both sides of the streets and overhead power lines that are strung on wood poles extend along the east side of North 21st Street through the district’s commercial core.

Between circa 1880 and 1930, a small industrial district developed north of the railroad tracks and east of the shops lining North 21st Street. While few of the earliest industrial buildings survive, a handful of 20th-century buildings remain. They range in size and construction from a large frame packing house to a concrete block creamery; from modest frame sheds that housed lumbering and milling activities to a concrete blacksmith shop. Most of the industrial buildings

**United States Department of the Interior
National Park Service**

**National Register of Historic Places
Continuation Sheet**

**Purcellville Historic District
Loudoun County, Virginia**

Section 7 **Page** 5

are sited on open, unpaved back lots, and are generally oriented toward the railroad or a main road.

Building Techniques and Materials

Because of the region's abundance of both timber and stone, Purcellville's early buildings reflect traditional, 19th-century stone and wooden construction techniques and building forms that were common in western Virginia and Loudoun County. A few early- to mid-19th-century buildings in Purcellville possess substantial stone foundations, stone chimneys, and traditional timber framing. Only a few examples of log construction exist in the district, including the circa 1880, one-and-a-half-story house at 150 South Maple Avenue (286-5001-0135) and portions of the Purcell House and Store at 131-133 East Main Street (286-5001-0192).

Beginning in the late 1860s, after the establishment of a national railroad network, building styles and construction methods began to change throughout Virginia and the nation. Prior to that, building methods were localized and regional differences were apparent in house forms and materials. In the 1870s, growing industrialization, the rise in mill-produced, standardized lumber, and the growth of a national railroad transportation network resulted in the standardization and commercialization of the building industry. As a result, manufacturers could efficiently produce and transport construction materials to distant markets. In the last quarter of the 19th century, balloon frame construction (a form of house framing that is made up of light, two-inch by four-inch boards held together by nails) rapidly replaced heavy-timber framing as the standard building technique.⁵

These transformations in the building industry occurred at the same time that Purcellville began to develop into a commercial town and are reflected in the architecture of Purcellville's Historic District. As diverse building materials became more readily available, house styles evolved to incorporate newly possible forms and details. In Purcellville, the result was at least a partial abandonment of traditional house forms and the adoption of more ornate and organic late Victorian styles.

In the 1920s, a concrete manufacturing plant was established in Purcellville at 100 East O Street (286-5001-0541). The popularity of concrete block as a building material in Purcellville during the early 20th century is directly related to this development. The use of molded concrete block,

**United States Department of the Interior
National Park Service**

**National Register of Historic Places
Continuation Sheet**

**Purcellville Historic District
Loudoun County, Virginia**

Section 7 **Page** 6

a decorative concrete block made in a cast and usually formed to resemble cut or rusticated stone, also reflects the impact of several destructive fires in town. The houses at 141 South 32nd Street (286-5001-0004), 600 South Maple Avenue (286-5001-0149), and 231 East Main Street (286-5001-0196) are three examples of houses constructed of molded concrete block. Several buildings incorporate concrete in their decorative features as well. Distinctive composite-style columns made of concrete appear on a number of houses in Purcellville, including the house that stands at 142-146 East Main Street (286-5001-0210) and the apartment building at 131-139 South Nursery Avenue (286-5001-0119).

Architects and Builders

As in other rural areas, the majority of Purcellville's buildings were designed and constructed by local or regional carpenters, including several African-American craftsmen. The latter included carpenter Joseph N. Cook, the Cox family, and stonemason Louis Rector. According to local informants, Cook constructed several houses in Purcellville's African-American neighborhood during the early 1900s. Houses attributed to Cook include 321 East G Street (286-5001-0106) and 521 South 11th Street (286-5001-0333), both traditional, two-story, side-gable, I-houses with little adornment. The Cox family lived and worked as contractors and stonemasons in Purcellville at the turn of the 20th century.⁶ Louis Rector's work can be seen in the elaborate stone walls and gate posts at 430 South 11th Street (286-5001-0330) and at 420 South 12th Street (286-5001-0241).

Among the regional builders who worked in Purcellville is one of Loudoun County's most prolific late-19th- and early-20th- century master builders, Arch Simpson, who is credited with the construction of the Bush Meeting Tabernacle in 1904 (286-5001-0234), the 1923 Purcellville School at 320 West School Street (286-5001-0551), and the former St. Peter's Episcopal Church built in 1911 and located at 320 West Main Street (now the Masonic Lodge, 286-5001-0160).

Based in Purcellville during the first half of the 20th century, the Case Brothers Company built churches, schools, and houses in Purcellville and throughout Loudoun County. Owner Clarence Case built Bethany United Methodist Church (1925-1929) at 100 East Main Street (286-5001-0118) and St. Francis de Sales Catholic Church (1921) at 360 East Main Street (286-5001-0218).⁷ In 1919, Case purchased property along North 31st Street and constructed at least four vertically massed, Craftsman Bungalows with prominent porches; two of these houses, at 211

Section 7 Page 7

and 220 North 31st Street (286-5001-0284 and 286-5001-0013), are good examples of Case-built houses. Stonemason Wilmer Baker was another local resident who did work in town, including the Bethany United Methodist Church.⁸

In addition to local and regional builders, a number of regionally prominent architects designed buildings in Purcellville. Architects include the firm Dennison and Hirus, who are credited with designing the 1915 Purcellville National Bank at 115 East Main Street (286-5001-0190). Delos Hamilton Smith, who designed the 1937 Public Works Administration-funded public library at 220 East Main Street (286-5001-0213), became a prominent architect and architectural historian in Washington, D.C. and northern Virginia.⁹ Other non-local builders who worked in Purcellville included L.J. Keller & Sons builders of Knoxville, Maryland, who acted as the contractor for the construction of the library in 1937.¹⁰

Outbuildings and Structures

The majority of the 143 historic outbuildings that contribute to the district are mainly one-story, detached, one-car garages or one-story storage sheds that are associated with residential properties. Other domestic outbuildings that appear in the district but are less common are associated with small-scale agricultural activities; examples include chicken coops, small barns, and stables. The 223 non-contributing outbuildings located within the district are typically one-story, two-car garages or small storage sheds.

There are eight contributing structures and eleven non-contributing structures located within the district; all are secondary resources. The contributing structures are barbecue pits that are associated with residential properties. The eleven non-contributing structures include freestanding carports, gazebos, barbecue pits, a pavilion, and one pond.

Architecture

Antebellum Period (1830 to 1860)

Residential Architecture

The earliest identifiable buildings in Purcellville are the two houses reputedly built for the Dillon family: one at 241 West J Street (286-5001-0097) and one at 250 North 21st Street (286-5001-

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Purcellville Historic District
Loudoun County, Virginia

Section 7 Page 8

0048). Both houses appear to date to the first half of the 19th century, although their exact construction chronologies have yet to be determined. Both are two-and-a-half-story residences. The J Street house is typical of the Germanic-influenced, stone houses built by Loudoun's wealthy farmers during the late 18th and early 19th century. The house was expanded in the late 19th or early 20th century with a two-and-a-half-story frame addition. The 21st Street house, locally referred to as the Breeden House, is frame with a stucco finish and displays a five-bay Federal form with double-flue, interior, gable-end, brick chimneys and a one-and-a-half-story frame wing. When built, the Breeden House would have stood well north of the tiny crossroads hamlet; its size and location on the road that led to Hillsboro (and on to Harper's Ferry) suggest that it may have served as an inn or tavern.

Another early building is the former Purcell House and Store that stands at 131-133 East Main Street (286-5001-0192). This early- to mid- 19th- century structure consists of several sections that were built at different periods. The earliest log section may date to circa 1815 with mid-to-late 19th century additions.¹¹ Valentine Purcell, the area's first postmaster, lived and worked here.¹²

The Asa Moore Janney House at 330 East Main Street (286-5001-0216) is one of Purcellville's most intact pre-Civil War buildings. Janney, a blacksmith and wheelwright whose shop once stood to the west of the house, built this two-story, frame structure in the late 1840s. A later deed describes it as a "frame house built between two large, field-stone chimneys."¹³

Commercial/Industrial Architecture

In the early 19th century, businesses at the crossroads that became the town of Purcellville included a general store, an ordinary, and a blacksmith and wheelwright shop. They lined what was known as the "Great Road," which later became the Leesburg and Snicker's Gap Turnpike (today's East and West Main Street, Business Route 7).¹⁴ The earliest of these businesses appeared in the late 18th century and were often housed in the homes of their proprietors or in modest, frame or log structures set near the main house. None of these early resources remain.

With the completion of the Leesburg and Snicker's Gap Turnpike, business activity in Purcellville began to expand in response to growing stagecoach and wagon traffic. The commercial district grew from a single store and post office in 1830 to about a half-dozen businesses by 1860.¹⁵ These businesses served the surrounding farmers and passing travelers.

National Park Service

National Register of Historic Places
Continuation Sheet

Purcellville Historic District
Loudoun County, Virginia

Section 7 Page 9

The oldest commercial structures to survive in Purcellville were built after the completion of the turnpike. In the 1830s and 1840s, the Purcells lived and ran their store and the town's first post office from the buildings at 131-133 and 141-143 East Main Street. The two-story structure at 131-133 East Main Street (286-5001-0192) includes an original log section that has had several additions. The structure has been used as both a residence and to house several commercial enterprises, including an early retail store, the post office, and the Bell Inn. The two-story, frame structure at 141-143 East Main Street (286-5001-0193) appears to have been altered. Since its construction, it has housed many tenants, including the town hall and the police department.

Reconstruction and Growth (1865 to 1914)

Residential Architecture

From the 1890s through the 1920s, Purcellville experienced an economic boom. The district's extant domestic architecture records the town's growing wealth in the sophisticated houses that appeared along its streets in the late 19th and early 20th centuries. The town's most popular architectural styles during this period include the Queen Anne and Colonial Revival styles, examples of which are primarily found along East and West Main Street.

The complexity of the Queen Anne style reflects post-Civil War changes in construction methods and the introduction of a multiplicity of machine-produced building elements. Queen Anne style houses display complex and asymmetric forms; a variety of projecting elements that include bay windows, dormers, and porches; and ornate woodwork and trim details. Some of the best examples in Purcellville stand in the 300 and 400 blocks of East Main Street and between North 23rd Street and South Orchard Drive on West Main Street. An outstanding and unique example stands at 210 West Main Street (circa 1890, 286-5001-0154). Others exist at 148 East Main Street (286-5001-0211) and at 240 West Main Street (286-5001-0157). The latter house was built for Walter Hirst in 1894.¹⁶

While there are a number of fully realized, high-style Queen Anne buildings in Purcellville, they are greatly outnumbered by the more modest, Victorian-era houses that typify domestic architecture throughout rural and small-town Virginia between 1890 and 1920. Often referred to as Late Victorian or as vernacular Victorian buildings, these residences illustrate the continued use of traditional building forms, but incorporate modest Victorian-style ornamentation. Examples in Purcellville range greatly in size and shape; however, they share a number of traits, including their plain, rectilinear forms, frame construction, and modest ornamentation. Exterior

Section 7 Page 10

ornamentation is generally confined to porches and eaves and employs a mix of styles. Many examples appear along Purcellville's secondary streets, including rows of houses on North 18th Street and scattered examples on South 12th Street and East G Street. The circa 1910 frame house that stands at 220-222 West Main Street is another good example.

Around 1900, Purcellville witnessed a stylistic transition from the highly ornamented Victorian-era styles to a more traditional, classically influenced mode of architecture. This new design mode has been termed the Colonial Revival style because it grew out of a renewed interest in America's colonial past, including its architecture. In the late Victorian era, Colonial Revival elements began to appear on buildings with asymmetric Victorian forms. The style was characterized by classical detailing, more restrained ornament, and a tendency to greater symmetry in house design. Examples of these transitional Victorian – Colonial Revival style structures can be seen in Purcellville at 300 and 301 West Main Street (286-5001-0159 and 286-5001-0177).

The appearance across Purcellville of repetitive house forms suggests both a reliance on traditional or vernacular building forms as well as the possibility of a single, prolific builder. One distinctive form seen in several locations on Main Street and Nursery Avenue is a two- or two-and-a-half-story, side-gable, two-room-deep dwelling that is distinguished by its prominent and steeply-pitched centered front gable and cornice returns. Most examples have full-width front porches and interior chimneys. They are variously styled with Victorian- and Colonial Revival- style details. Examples include 200 Nursery Avenue (286-5001-0115), 121 East Main Street (286-5001-0191), 401 East Main Street (286-5001-0203), and 420 East Main Street (286-5001-0221). The close similarities among these houses suggest that they were designed and constructed by a single builder.

Religious Architecture

Built in 1892, Purcellville's first church was originally known as the 'Free Church' since it was open to all denominations. It alternated between the town's Presbyterian and Methodist congregations. The original one-room, wood-frame building is now part of the funeral home at 140 South Nursery Avenue (286-5001-0114), which stands just south of Bethany United Methodist Church. Although expanded and remodeled, the front-gable structure with a centered oculus window is still recognizable.

The only other church in the district that was built during this period is the former St. Peter's

United States Department of the Interior

Purcellville Historic District
Loudoun County, Virginia

Section 7 Page 11

Episcopal Church. The building is currently occupied by Purcellville's Masonic Lodge and stands at 320 West Main Street (286-5001-0160). The frame structure stands on a stone foundation and features distinctive flared eaves and a flared base. Arch Simpson constructed the church in 1911 on land donated by Maria B. and Dr. Fenton M. Nichols.

Institutional Architecture

In 1899, the first public school in Purcellville was erected at 221 South 20th Street (286-5001-0056). The two-room building was erected after Purcellville parents petitioned the Loudoun County School Board to replace the existing privately run school, which had been acquired from Joseph and Tammie Dillon in 1883.¹⁷

As early as the 1870s, open-air religious gatherings known as "Bush Meetings" were held in the area then called Dillon's Woods, south of town. In 1904, local builder Arch Simpson built the Tabernacle, a wooden structure intended to replace the tents and temporary structures that previously housed the gatherings. Located south of the Bethany United Methodist Church at 250 South Nursery Avenue (286-5001-0234), the Tabernacle housed the Bush Meetings until 1930. The building also hosted the County's 4-H meetings and, by the 1930s, was being used as a roller skating rink.

Transportation

In 1904, the W&OD erected a new passenger and freight depot at the intersection of North 21st Street and the railroad tracks (200 North 21st Street, 286-5001-0233). It replaced an earlier station that was built when the train first started running to Purcellville in 1874. The existing building is one of the largest examples that remain on the former W&OD line. Constructed with board-and-batten walls and covered by a hipped roof with wide, flared eaves, the building was carefully restored by the Purcellville Preservation Association in the 1990s.

Commercial/Industrial Architecture

After the establishment of the railroad in 1874, Purcellville began to expand into a central commercial and industrial hub that served the prosperous agricultural community in western Loudoun County. One of the earliest commercial/industrial structures from this era in the district is Dillon's Warehouse at 201 North 21st Street (286-5001-0028). Built with a heavy timber frame, the warehouse was constructed in 1874 for John J. Dillon; by 1905, it housed a milling business and, by the 1930s, a store and farm implements warehouse. The Contee Adams Seed Company took over the building in 1943 and continued to operate there through the

Loudoun County, Virginia

Section 7 Page 12

1980s.¹⁸ Another early commercial building is the former livery stable that stands north of 137 North 21st Street (286-5001-0040). Erected in the 1880s, it now houses part of Nichols Hardware, the oldest operating business in town.

Most styles of commercial architecture seen in Purcellville's business district are typical of the first three decades of the 20th century. The oldest of these displays features that are characteristic of Late Victorian commercial buildings, including a stepped parapet roofline, a heavy decorative metal cornice, and a glass storefront with elaborate woodwork. The former post office and town hall located at 101-109 North 21st Street (286-5001-0031) is an excellent example of this style of commercial architecture. Built in 1908 by local businessman Nick Hampton, this all-concrete-block building later operated as an ice cream parlor and a restaurant.

After the 1900 and 1914 fires, Purcellville enacted what is reputedly one of the state's first building codes.¹⁹ As the commercial district was rebuilt, its buildings began to reflect the more restrained and modern style that came to prevail in Virginia after 1910. The new style was characterized by modest ornamentation that was usually confined to the cornice and storefront. Typical cornice treatments are simple corbelled brick, brick patterns, or classically inspired shaped metal or wood cornices. Storefronts still exhibited large shop windows, but often incorporated larger expanses of glass, inset entrances, and modern decorative glass doors. A good example of this predominant commercial style stands at 105-107 East Main Street (286-5001-0189).

World War I to World War II (1914 to 1941)

Residential Architecture

During the 1920s and 1930s, the Colonial Revival style matured and became more academic. These later Colonial Revival houses derived their form and details directly from historic examples of Colonial- and Federal-era architecture. The organic Victorian forms gave way to more traditional, rectilinear shapes derivative of 18th- and early-19th-century buildings. Designers employed details drawn directly from studies of existing early American houses. The restoration of Colonial Williamsburg and the work of a number of Virginia architects and designers interested in preserving Colonial-era homes helped to popularize this new Colonial Revival style. The houses at 341 and 431 West Main Street (286-5001-0201 and 286-5001-0182) are textbook examples of this fully realized Colonial Revival style. The former is a two-and-a-

**Purcellville Historic District
Loudoun County, Virginia**

Section 7 **Page** 13

half-story, side gable frame house that incorporates a five-bay-wide, symmetrical façade, flanking 1-story porches, and a pedimented front portico.

After 1920, other architectural styles became popular in town. Among these was the Craftsman style, which is often associated with the simple bungalow form that rose to prominence in the 1920s and 1930s when home ownership among the middle and working classes in the United States greatly increased. Bungalows were designed to be inexpensive to build and easy to maintain without hired help. A typical bungalow is one or one-and-a-half stories in height; has a compact, rectilinear footprint; and features a full-width front porch, wide eaves, and a low-slung profile. Built in 1921 for dentist Harry Taylor, the Taylor-Zimmerman house at 241 West Main Street (286-5001-0175) is a sizable example of a Purcellville bungalow. More typical example of this generally modest house type stand at 130 South 32nd Street (286-5001-0003) and 501 West Main Street (286-5001-0183).

The American four-square form also became popular for residences during this era. Four-squares are two stories tall, have a generally cubic form, and incorporate a four-room over four-room plan. They often feature hipped roofs, full-width front porches, and off-center, front entrances. Pyramidal or hipped roofs require more complex framing to construct, but they can be built with shorter rafters than conventional gable roofs, and thus were less expensive to construct. Four-squares were popular in Purcellville and can be seen at 131 and 200 South Orchard Drive (286-5001-0021 and 286-5001-0023) and at 350 South 12th Street (286-5001-0083).

Religious Architecture

In the 1920s, three churches were built in Purcellville. All are masonry structures; two reflect the popularity of the Gothic Revival style in ecclesiastical architecture, and the third is an excellent early example of the Classical Revival style applied to religious architecture. In 1921, local contractor Clarence Case built a Gothic Revival-style, brick church for St. Francis de Sales Catholic Church at 360 East Main Street (286-5001-0218). Four years later, Case and stonemason Wilmer Baker constructed Bethany United Methodist Church at 100 East Main Street (286-5001-0118) in the Gothic Revival style on land donated in 1919 by Mary E. and Joseph Dalton Dillon. Built by local contractors Clarence and Otto Kelly of Bluemont in 1927-28, the Flemish-bond brick Purcellville Baptist Church stands at 221 South Nursery Avenue (286-5001-0430) and features a monumental portico and a highly symmetrical form.

Section 7 Page 14

Institutional Architecture

Throughout this period, Purcellville erected only a few modest public buildings. In 1923, Arch Simpson built the Purcellville School building that still stands at 320 West School Street (286-5001-0551). When it opened, the new seven-room building replaced the 1899 schoolhouse. The frame school building reflects the growing educational needs of the town; its symmetrical form and large banks of windows are typical of school buildings of the period.

In 1937, Laura A. Cornwell, Edna H. Ray, and Eva H. Wimer donated land on East Main Street for a town library. The Purcellville Library at 220 East Main Street (286-5001-0213) was designed by Delos H. Smith, a Washington, DC-based architect, and built by L.J. Keller and Sons of Knoxville, Maryland. The stone library was built with private subscriptions and with federal funds from the Depression-era Public Works Administration (PWA).

Commercial/Industrial Architecture

Between World War I and World War II, Purcellville's commercial district was filled in with generally low-slung, attached commercial structures with simple detailing. However, a few more ornate and distinctive buildings were also erected during the period.

An important landmark of Purcellville's commercial history is the 1915 bank that stands at 115 East Main Street (286-5001-0190). Built of buff-colored brick, the Classical Revival-style bank was designed by the architectural firm of Dennison and Hirus. The structure is an excellent example of bank architecture of the period and retains most of its historic architectural features.

In the 1910s, the more ornate late Victorian style of commercial building continued to be built. An intact example stands at 108 North 21st Street (286-5001-0032). Built circa 1915, this two-story, brick building, with projecting metal cornices, housed the Atlantic & Pacific Tea (A&P) Company in the 1920s.

In the 1930s and 1940s, commercial architecture in Purcellville became even more simplified and plain. Influenced by the machine-inspired Art Deco style and other modernist movements, Purcellville's commercial buildings from this period exhibit relatively flat brick facades that are adorned only by shallow, inset panels and minimal corbelled brick cornices. One of Purcellville's best examples is the one-story, brick, commercial structure at 120 West Main Street (286-5001-0151) that once housed an automobile dealership.

The New Dominion (1941 to Present)

Residential Architecture

In Purcellville a significant number of houses were built during the nationwide housing boom that followed the end of World War II. This growth partially reflects the beginnings of the transformation of Loudoun County into a bedroom community for Washington, DC.

In the 1940s and early 1950s, several new house styles appeared in the district. As American builders ramped up to build large numbers of houses for returning war veterans, they adopted simple house forms that could be built quickly at low cost and could be easily adapted to suit any setting. Among these is the Tudor Revival style, which is characterized by steeply-pitched, multi-gable roofs; large, prominently placed chimneys; and asymmetrical facades. A few examples of this style exist in the district, including the houses at 171 West K Street (286-5001-0385) and 221 West K Street (286-5001-0477). Another house type that became popular after World War II and now widely referred to as the Cape Cod cottage appears throughout the district. This form, which is one-and-a-half stories in height and typically incorporates Colonial Revival details, features a symmetrical façade and dormers that puncture a prominent side-gable roof. Cape Cod houses can be found at 210 South 32nd Street (286-5001-0290) and 211 West K Street (286-5001-0478).

Colonial Revival houses came in other forms as well. The two-story, center-hall form with an accentuated front door, side wings or porches, and a symmetrical facade is also common in the district. Two excellent examples appear at 400 South 32nd Street (286-5001-0299) and 301 South 32nd Street (286-5001-0293). The Colonial Revival style in all its forms remained popular in Purcellville throughout the 1950s.

After 1950, these architectural styles began to be simplified as the influence of Modernist trends and a move away from ornamentation resulted in plainer house styles. Among the new styles that developed are the Minimal Traditional and Ranch styles.

Minimal Traditional-style houses are generally one story and feature side-gable roofs with low-pitched front gable wings extending from the front. Their close eaves and prominent chimneys derive loosely from the Tudor Revival and Colonial Revival styles of the previous decades; however, they typically lack stylistic detailing.²⁰ One of the most unaltered examples can be

Section 7 Page 16

seen at 311 South 32nd Street (286-5001-0295); another example can be found at 510 West N Street (286-5001-0422).

A form that became ubiquitous in the automobile-oriented suburbs of the 1950s and 1960s, the Ranch house is characterized by a one-story, horizontally massed form with an extremely low-pitched roof and overhanging eaves. Ranch houses often feature attached garages, hipped or side-gable roofs, and wide picture windows. The form rose to popularity as Americans' reliance on the automobile grew.²¹ As the Ranch house gained in popularity, more simplified versions began to appear and be built as infill housing in established towns and neighborhoods. These simplified versions inserted on infill lots predominate in Purcellville, where examples typically lack stylistic details such as shutters and iron work and are smaller in scale. The exception is a collection of approximately 30 houses that were constructed as a single development between 1950 and 1954 on West F Street at the south end of the district. The houses at 181 West F Street (286-5001-0491) and 195 West F Street (286-5001-0494) are excellent examples of the horizontally massed, asymmetrical Ranch designs found in Purcellville. Scattered Ranch house development can be found on the north end of South 26th Street, where 121 and 131 South 26th Street (286-5001-0249 and 286-5001-0251) exemplify the characteristics of the Ranch house as it appears in Purcellville. Two other examples, both of which are more customized but still reflect the general popularity of the Ranch house, can be found at 331 South 12th Street (286-5001-0237) and 361 South Orchard Drive (286-5001-0451).

Religious Architecture

Only one church in the district dates from this period. Built in 1949, Grace Annex replaced the original African-American Grace Methodist Episcopal Church that was built in nearby Lincoln in 1884. The existing brick church that stands at 441 South 12th Street (286-5001-0230) was built in response to the demands of its growing Purcellville-based congregation.²²

Institutional Architecture

In 1950, the Purcellville firehouse (286-5001-0246) was constructed at 128-132 South 20th Street (286-5001-0246). The 1.5-story building was constructed in a simple, side-gable Colonial Revival-style form with three dormers and three truck bays across the front. The building has been adapted for use as a commercial business but continues to convey its Colonial Revival style as well as its original use.

Integrity

The Purcellville Historic District is comprised of 469 properties that contain a total of 850 buildings. Seventy-two percent of the main buildings (primarily dwellings, commercial, institutional, and industrial buildings) contribute to the architectural and historic significance of the historic district, while only 39 percent of the outbuildings (primarily garages, sheds, and barns) contribute. The large number of non-contributing outbuildings does not greatly detract from the overall integrity of the district since most are set back from the street, are small in scale, or are not visually prominent. The vast majority of the buildings and structures built during the period of significance continue to reflect their historic associations and retain the physical characteristics that identify them as products of their time and place. Although scattered buildings have been compromised by recent additions and the introduction of synthetic materials, the district as a whole retains integrity of location, design, setting, materials, workmanship, feeling, and association. Although the district's integrity of materials and setting have been weakened in recent years with the construction of numerous single-lot infill residences, these are scattered.

A greater threat to the district is the construction of large-scale, multi-lot residential developments on its perimeter, and in one instance, within the central portion of the district. Between 2005 and 2006, sixty-two single-family dwellings with detached garages were constructed at the Courts of St. Francis, a suburban-style residential development that is located within the super block bounded by East Main Street, South 20th Street, South 12th Street, and East G Street in the town's southeast quadrant. Historically, this super block consisted primarily of residences that faced the street on relatively narrow and very deep lots. A large undeveloped expanse of land occupied the center of the block. The central undeveloped area has been subdivided and a series of interconnecting streets have been developed with houses, while the outer streetscape remains intact. Although out of character with the historic development pattern of the town, the Courts of St. Francis is only minimally visible from the historic streets that bound the super block, thus its visual impact on the district is minimal.

January 2006: This 2.5-story, 3-bay, symmetrical house features a center gable with raked eaves and cornice returns. The roofline is highlighted by a frieze board and the front and rear gable ends are punctured by an arched, double hung window, while the side gable ends are punctured by two arched, double hung windows. The full-width front porch is supported by engaged and freestanding turned posts. Windows throughout are highlighted by flat surrounds. There is a square, interior end, brick chimney projecting from each end of the roof ridge. The front door is flanked by 3-pane sidelights and topped by a 3-light transom. A centered, 2-story, front-gable ell projects from the rear and has a central, interior, square, brick chimney projecting from the roof ridge, near the rear. There is a 1-story, shed-roof projection with 6-over-6, double hung windows attached to the rear of the ell and another attached to the south side of the ell.

January 2006: This dwelling is composed of two sections: the original section, a 2.5 story frame structure, features a steeply-pitched, front gable roof with a 2-bay front porch, two double hung windows in the front gable, and a continuous shed-roof dormer on the south side. The second portion of the building sits perpendicular to the main portion and is attached to the northeast corner of the building. The side-gable portion is a 2-story, side gable, frame structure that has a gable-roof portico on the east side. There is a 1-story, shed-roof extension on the west side of the main building that has sliding, metal doors and casement windows and is likely an earlier porch that has been enclosed. There is also a second story entrance on the rear of the main building that is accessed by wooden stairs covered in a gable-roof. Gable ends of both buildings are punctured by round, louvered vents. This portion of the building has an exterior end, brick chimney. The continuous shed-roof dormer on the south side of the main building is an addition to the steeply-pitched roof. Windows throughout are highlighted by vinyl louvered shutters.

Primary Resource Information: **Blacksmith Shop, Stories 1.50, Style: No Style Listed, ca 1920**

March 2006: This 1.5 story, gable-roof building is constructed of coarse, poured in place concrete. Plywood has been installed on the gable ends. The east and west facades have symmetrical fenestration which includes a single, centered, bay door flanked by two window openings and topped by a loft doorway. The east side window openings have been in-filled with concrete block, the bay has also been in-filled with a metal, crank, casement window surrounded by concrete block. The west facade window openings have also been in-filled with concrete block, while the bay has been in-filled with aluminum siding punctured by a single pedestrian door and a 1-over-1, double hung, aluminum window. The north façade features a single centered, bay door, flanked by two window openings on each side. The window openings farthest from the bay door have been in-filled with

plywood. Windows throughout appear to have poured concrete sills. The concrete block in-fill appears to be circa 1950. A metal stovepipe projects from the west side of the south gable wing. There is also a 1-story, shed-roof addition that runs the full length of the south façade and features a rolling metal door on the west side. The circa 1935 addition is clad in a mix of plywood and seamed metal and sits on a poured concrete foundation, has exposed rafter tails, and is topped by a standing seam metal roof.

Primary Resource Information: **Commercial Building, Stories 2.00, Style: Other, 2003**

February 2006: This 2-story, four-part commercial and office building is clad in a brick veneer. Although it appears as four buildings on the exterior, the interior spaces are connected. The fenestration, window surrounds, and cornice on each of the four major sections is different. A raised walkway constructed of poured concrete runs along the southwest elevation. Poured concrete stairs located at the south corner lead to this walkway and to double doors at the south corner, which is clipped.

0198 21st Street North 286-5001-0044

Primary Resource Information: **Mill, Stories 2.50, Style: No Style Listed, 1905**

February 2006: This 2.5-story, front-gable mill incorporates two front-gabled sections and a front-gabled monitor with a 6-over-6 window in each gable end. On the front section, a 1-story, shed-roofed overhang shelters the three bays on the first story. The second story, which is almost twice the height of the first story, features double sliding doors. There is a 6-over-6 window in the front gable. The rear section of the former mill is shorter than the front section. Portions of the side-gabled section that extends from the south elevation of the rear section may have been built prior to 1933. A complex of additions off the sides and rear incorporate and build off the historic structure. On the south elevation of the front section, there is a 1-story, shed-roofed addition covered with rusticated metal siding and a projecting bay on the west that is the main business entrance. A 1-story, shed-roofed porch extends from the north elevation.

Primary Resource Information: **Depot, Stories 1.00, Style: Late 19th and Early 20th Century American Movement, 1904**

February 2006: This is a single story, wood frame, rectangular-shaped structure with a hipped roof, flared overhanging eaves, 6/6 windows, and board and batten siding. The original sliding freight doors remain as do the four, five-raised panel entry doors, and the two interior brick chimney stacks. The building was renovated in 1998-1999. The renovations included raising the freight room floor to the same level as the waiting room and replacing the original windows. The freight door openings were in-filled with large-pane windows or a door and windows.

February 2006: This original section of this building consists of a 3-story, side-gable base with brackets in the eaves topped by a centered, 1-story, side-gable block. The building is sided in weatherboard and corner boards. This portion of the building has 1-over-1 vinyl windows on the front façade and vinyl casement windows on the rear facade. There is a narrow extension on the rear that runs $\frac{3}{4}$ of the length of the building and has a concrete block foundation. The front porch of the building runs the full-width of the front façade and continues to the south where it connects the main portion of the building with the concrete block, circa 1940s addition. The 2-story addition has a 3-light, fixed pane window and a single pedestrian door on the front façade. The addition features 1-over-1 vinyl windows with projecting header brick sills and paneled wood shutters. The addition has a stepped parapet that conceals the shed-roof covered in standing seam metal. There is also a 1989 addition on the

December 2005: This 2.5-story, asymmetrical house features a hipped-roof with flat, overhanging eaves and a 2-story, full-width portico sitting on a stone base. The first story of the front facade has two projecting bay windows and a main entrance surrounded by a decorative surround with a broken pediment and flanking sidelights. There is a square, central interior, brick chimney on the north side of the house and a rectangular, stone, exterior end chimney punctures the wide overhanging eave near the southern corner of the east facade. The lower story is clad in stucco while the upper story is clad in horizontal siding. First story windows are 1-over-1, double hung and second story windows are 9-over-1, double hung. Front facade windows are flanked by louvered, wood shutters. The main roof is topped in metal pressed like shingles, and the portico roof is topped in standing seam metal. There is a 2-story, projection on the east side of the south facade and another centered on the east facade. There is a hipped-roof dormer on the south facade. There is a centered, stone stair that extends approximately $\frac{3}{4}$ of the width of the front facade and is flanked by coursed stone walls.

December 2005: This 1.5 story, 3-bay, asymmetrical house, features a large, steeply-pitched, projecting, off-center, front-gable that flares on the south side and extends over the south facing, front door. The flared overhang is supported by a single, square, wood post. The first floor of the front-facing gable features triple configured, 6-over-6, double hung windows and the second story features a single configured, 8-over-8, double hung window flanked by two single configured, 8-over-8, double hung windows. The gable end is pierced by an arched, louvered vent. The side-gable portion of the front façade features paired 6-over-6, double hung windows. The wide, rectangular, central interior chimney projects from the center of the side-gable section of the roof, just east of the roof ridge. The north façade of the house features a gable-roof dormer with a louvered vent in the peak and three 8-over-8, double hung windows. There is also a raised, 1-story, flat-roof projection on the north façade with rows of windows on each side. The projection sits on an arched, stone base which allows access to a parking area below the house. The front facing gable has no eaves while the remaining roof lines have shallow eaves and a frieze board.

0201 G Street East 286-5001-0100

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Other, ca 1900**

January 2006: This 2-story, frame house with steeply pitched center-gable and significant cornice returns, has a 2-story, lowered, side-gable addition on the east and a full-width front porch flanked by two gazebos on the south. The main 3-bays of the house are clad in stucco, while the circa 1950 addition on the east is vinyl sided. In 2004, the former 3-bay porch was added on to creating the existing wraparound porch and a 2-story addition was added to the west side of the rear of the house in 2004.

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Late Victorian, 1920**

January 2006: This 2-story, side-gable house features a cross gable to the west with a window in the gable. The house is clad in wood German siding, and the roofline features large cornice returns and boxed, overhanging eaves. The front façade has been significantly altered by the enclosure of the 1-story front porch with brick veneer; the porch also incorporates a wood roof balustrade. There are two 1-story, shed-roofed porches with turned posts on the east elevation. A 2-story addition with porch has been placed on the rear. The first story of the rear porch is screened in while the roof is enclosed by a balustrade.

Section 7 Page 60

A modern concrete block, exterior end chimney stands at the east gable end and a former brick, interior end chimney located at the west gable end of the ell has been removed. There are several historic additions to the house. A 2-story, gabled addition that extends from the east end of the rear elevation was built in the early 20th century, creating a rear ell. A 2-story, shed-roof addition was added after 1930 and a 1-story addition extends from the north elevation of the house. A gable roof entry portico to the basement is located on the SW corner of the house. The 1-story, 1-bay porch on the façade or south elevation is supported by brick piers set on stone posts similar to the gateposts lining G Street. The windows and doors of the original house feature flat wood trim.

The original portion of the house has a center-hall, 2-room plan. The circa 1900 rear "ell" once held the kitchen and now contains the dining room. The current kitchen is located in the 2-story, shed-roof addition that infills the area between the ell and the original house. A porch and a pantry extend to the south of the house.

The cellar, excavated below the original stone foundations of the house and accessible via a door in the west gable end formerly housed the kitchen. Timbers visible in the basement are pit-sawn and the walls have been whitewashed. The cellar floor is dirt and Mr. Clark removed a brick, interior end chimney once located here when he put in a furnace. Stairs that led from the cellar to the den have been removed. The current owner indicated that Billy Pierce had the rear ell addition built and the front porch replaced with the current configuration. Mr. Clark constructed the kitchen and additional bedroom, as well as the pantry and back porch.

The interior is finished in plaster with simple 5" flat wood trim around windows and doors. The floors consist of random-width planks and the interior doors are 4-panel, Victorian-style doors. The central staircase is entirely enclosed and is approached by a small landing just inside the front door.

January 2006: This 2-story, front-gable, vertically massed, frame house has a 3-bay, first story porch topped by a non-historic, second story enclosure, on the front façade. The original square chimney punctures the roof ridge near the front of the house and an additional interior end chimney has been installed at the northwest corner of the house. There is a 1-story addition on the rear, which wraps around the west side of the house, that has a half-hipped roof. The second story addition on the front façade and the combination of double-hung window configurations throughout, suggest that a significant non-historic renovation took place.

Primary Resource Information: **Single Dwelling, Stories 2.50, Style: Other, ca 1910**

January 2006: This 2.5 story, cross-gable, frame house features an L-shaped porch along the west and south sides which leads to a recessed, front-facing secondary entry located on the side ell. The battered, square, wood porch columns on brick piers were likely part of a circa 1920 renovation. The porch is accessed by wood steps to the tongue and groove flooring. The house is clad in German siding and corner boards with small capitals. The gable ends are punctured by 4-light, casement windows. The front-gable portion of the house has single configured windows, while the ell features paired windows. Windows throughout are highlighted by flat, wood surrounds and louvered, wood shutters. A central, brick chimney projects from the roof ridge, near the gable intersections.

Primary Resource Information: **Single Dwelling, Stories 2.50, Style: Mixed (more than 3 styles from different periods), ca 1800**

February 2006: This dwelling consists of a 2-story, side-gable stone portion with quoins and a circa 1910, 2.5-story, frame addition on the east side. The original masonry section features 6-over-1, double hung, wood windows with projecting wood sills on the north and south facades and two rectangular, louvered vents on the west gable end and 4-pane, wood windows on the east gable end. The north façade also incorporates a raised entrance which has been enclosed with clapboard siding with corner boards and has 6-over-6, double hung, wood windows. An enclosed porch, clad in vinyl siding connects the masonry building sits centered on the intersection between the masonry building and the frame portion on their north facades. The south façade of the masonry section features a centered, 1-story, 3-bay German sided enclosure that houses the front entrance which is topped by a 3-light transom. The front entrance is flanked by rusticated, concrete block walls. The enclosure is connected to the west façade of the frame portion of the house by a circa 1995, shed roof addition. The frame portion of this house consists of a cross-gable roof, oriented to the east, that has a 3-bay porch on the east side. The frame section is clad in German siding with corner boards and has 2-over-2, double hung, wood windows, some of which have been replaced with vinyl windows. The gable ends are pierced by arched, double hung windows, the southern of which is likely a circa 1995 addition. There is also a 2-story, projecting bay on the south side of the frame portion that features paired windows. The roofline of the frame portion is highlighted by raked eaves, cornice returns, and a frieze board. Two chimneys appear on the house: one interior end, rectangular brick chimney projects a short distance from the east side of the masonry building's roof ridge and another rectangular, brick, central interior chimney projects from the center of the frame building's roof ridge.

Primary Resource Information: **Mixed:Commerce/Domestic, Stories 2.00, Style: Other, ca 1815**

January 2006: This 2-story house features a side-gable roof attached to a front-gable, hipped roof on the east, which tops a 2-story portion, the bottom of which is a 1-story stuccoed 3-bay portion. The front incorporates a 1-story, 3-bay porch, centered on the 6-bay façade. The front facing gable of the hipped-roof features a 4-pane window and boxed eaves with cornice returns. The easternmost portion of the house has 2-over-2 windows with wood surrounds and the westernmost portion has 9-over-6 windows on the first floor and 6-over-6 windows on the second floor. Windows all along the first floor of the front façade are highlighted by louvered, wood shutters. The house has four chimneys; the west façade, exterior end chimney features a stone base and a brick stack that is unattached to the building, the rectangular, central interior chimney which punctures the roof ridge just west of the cross gable is brick, the square, exterior end chimney on the east faced is brick, and a central interior, square brick chimney projects from the intersection between the front facing gable and the rear 2-story addition. The rear of the house features a 2-story, low-pitched, gable-roof addition which is flanked by 1-story porches supported by classical, square columns. The 1-story stuccoed southeast corner is likely the original construction on the site, while the 2-story section to the west is a later addition. Finishes to the second story addition to the stuccoed portion suggest it was constructed circa 1910.

January 2006: This 1-story, 2-bay, side-gable, Flemish bond building features an off-center front door, accented by wood surrounds and an entablature on the east side of the front façade and a projecting bay window topped by standing seam metal that consists of a fixed-pane center window flanked by 1-over-1 double hung windows on the west side of the front facade. There is a rectangular, interior end, chimney projecting from the roof ridge at its intersection with the east façade and a circa 2000, suspended, bay window projecting from the east façade. The east and west façade windows have soldier brick lintels and projecting concrete sills. There have been three brick additions to the main, gable-roofed building. The first has a shed roof that extends from the rear wing of the main roof. This full-width addition is 1-bay wide and has another shed roof addition on its rear. The middle additions are Flemish bond. The northernmost addition is constructed of concrete block with a brick veneer on the west side. The addition has a flat roof and is wider and taller than the two middle additions. The north façade of this circa 1950 addition has a circa 2000 portico accenting the entrance. The portico is topped with asphalt shingles and is supported by Tuscan columns. The fenestration includes fixed-pane windows on the west façade and casement windows on the north façade.

Primary Resource Information: **Library, Stories 1.50, Style: Tudor Revival, 1937**

January 2006: The original library building is the L-shaped, stone, 1.5-story section at the north end of the building. The stone section features a wide projecting front gable; steeply pitched gable roofs; and paired windows. At the east and west gable ends, there is a large stone chimney flanked by arched windows; most of the chimney is interior, but a small section projects beyond the exterior wall. Stone steps in the inside corner of the "L" on the front elevation lead to the entrance, which is located in the east elevation of the projecting gable. Entrances to the basement level are located on the east and west elevations; the west entrance is sheltered by a wood overhang and set within a short stone bulkhead. On the south and east elevations, the basement level is fully exposed. A large addition constructed in the early 1990s extends from the rear elevation of the original library. The addition is irregularly shaped, incorporating several cross-gables and a square tower. The rear addition has a stone water table, stuccoed walls, and an asphalt shingle roof.

addition attached to the southeast corner. The original section of the house sits between flanking coursed stone chimneys with quoins and parged upper sections. The roofline is highlighted by a frieze board on the front façade and close eaves. The front façade features a centered porch supported by square columns and pilasters and two, centered, front doors. There is a single configured window on the west side of the front doors and a pair of adjacent windows on the east side of the doors. Fixed-pane lights appear in the gable ends. The rear wing of the side-gable roof has been extended to house the 2-story, full-width rear addition with the shed-roofed porch attached. The closed, front-gable addition to the east of the main section features an arched, louvered vent in the gable and paired windows on the first and second story of the front façade. A large, square, louvered, vent cap projects from the center of the roof ridge on the side-gable addition and a 2-story, bay topped by a half-hipped roof, projects from the rear of the addition. The two major additions on the house appear to be circa 2000.

0331 Main Street East 286-5001-0200

Primary Resource Information: **Single Dwelling, Stories 2.50, Style: Late Victorian, 1904**

January 2006: This 2.5 story, 3-bay, symmetrical house features a steeply pitched roof with a centered gable which is highlighted by the roof's frieze board, raked eaves and cornice returns. The front gable is punctured by a trio of adjacent 1-over-1, double hung windows, the center of which is arched. The exterior end, stone chimney sits centered on the west façade and has flanking, poured concrete curved elbows just above the second story fenestration. The centered, front door is highlighted by a decorative surround, flanking multi-paned sidelights, and a 20-light transom. Windows throughout are highlighted by window surrounds, projecting wood sills, and louvered, wood shutters. The porch runs the full-width of the front façade and extends 1-bay deep on each of the side facades. According to the owner, the porch posts and decorative bracketing are the result of renovations completed in 1994.

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Colonial Revival, 1910**

December 2005: This 2-story, 3-bay, symmetrical house features an extremely low-pitched, hipped, pyramidal roof with wide, overhanging eaves. The roof is punctured by a hipped-roof dormer on the front and a wide, rectangular, brick chimney on the west side, near the point. The full-width front porch is supported by square, wood columns that are paired at the southern corners and matching, paired pilasters on the northern corners. There is a simple frieze at the porch roof that includes dentils in the bed molding. The columns rest on the stuccoed wall that encloses the porch. The centered front door, which is flanked by sidelights, is topped by a row of three single-paned transoms. There is a simple, wooden string course along the tops of the second story windows. The west side entrance has been enclosed with wood siding and there is a 1-story, stuccoed projection on the rear of the house. There is a projecting, suspended bay window on the east side of the house.

December 2005: This 2-story, 5-bay transitional Queen Anne/Colonial Revival house features a hipped pyramidal roof with off-center, closed gables over the 2-story, curved bay windows. The gables are clad in square butt, wood shingles, pierced by fanlights, and outlined with raked, boxed eaves and dentils. Fenestration throughout is highlighted by cast concrete sills and lintels. The wraparound porch includes a projecting, portico over the stairs and dentils along the roofline. There is single light transom over the front and side entrance and the square chimney punctures the roof peak.

February 2006: This 2.5-story, 2-bay, German sided house features a hipped-roof highlighted by a frieze board and punctured by hipped-roof dormers with 2-light casement windows with diamond-paned glass. The front façade features paired windows on both floors and a full-width front porch supported by freestanding and engaged Tuscan columns. The north façade features a diamond-shaped window with multi-paned colored glazing. The 1-story, rear porch has been enclosed with German siding and corner boards with small, decorative capitals, and a second story, gable-roofed addition has been constructed. The wide, rectangular, exterior end, brick chimney sits on the south façade and is likely a circa 1950 addition, while the original, square, chimney projects from the southeast side of the roof ridge. Predominately 6-over-6, double hung, wood windows exist on the house, an exception is on the first floor of the front façade, where the windows are double hung, 6-over-9. Windows throughout are highlighted by flat, wood surrounds and louvered shutters.

February 2006: This 2.5 story, 2-bay, symmetrical house is constructed of rusticated, concrete block with projecting corner quoins and features a hipped, pyramidal roof with a flat ridge and closed, gables on the north, south, and west sides. The roof lines feature boxed, raked eaves. The north and south main roof wings are punctured by square, central, interior, variegated brick chimneys, the latter of which has a corbelled cap. Double hung windows and square butt, wood shingles exist in each of the gable ends. The front facing gable features paired, double hung windows while the remaining gable faces are punctured by single configured double hung windows. Windows throughout the house are 1-over-1, double hung and vary in width, they are widest on the front facade. The fenestration on the first two floors has wide, molded concrete lintels and sills. There is a 2-story, projecting bay window, topped by a projecting closed gable on the rear half of the north façade. An L shaped porch runs along the north and west sides of the house and its half-hipped roof is supported by square, molded, inset panel-faced, concrete blocks resting on rectangular, molded, inset panel-faced, concrete block piers. The historically 2-bay porch on the rear of the house has a half-hipped roof which is supported by molded composite columns that sit on rectangular, molded concrete block piers. The southernmost bay of the rear porch has been in-filled and consists of vinyl cladding on the north and east sides and rusticated stone on the south side. Both porches have concrete floors and are topped with standing seam metal roofing. The door on the east

Primary Resource Information: **Church, Stories 1.00, Style: Other, 1892**

November 2005: The 1-story, frame church that was constructed in 1892 stands roughly in the center of the current structure. The section that was originally a church has a stone foundation and elongated 9-over-9, double-hung, wood sash windows with metal surrounds that are likely non-historic. The front-gable end that faces Nursery Avenue incorporates a circular wood window. According to local histories, the original church had a one-room plan. The entire structure (including the former church) is sheathed in vinyl siding. Several 1-story additions have been constructed to the sides and rear of the church, including a garage at the south end of the building. A 1-story, pedimented portico supported by square columns is located in the inside corner of the "L" of the former church; this portico does not appear on the 1933 Sanborn map. A front-gabled section at the north end of the building is connected to the former church by a breezeway. The building currently houses a funeral home.

Other DHR Id #: **286-5001-0234**

Primary Resource Information: **Auditorium, Stories 1.00, Style: Other, 1904**

March 2006: Built in 1904, the Tabernacle consists of an 8,500-square-foot, 1-story, frame building that was constructed as an auditorium to house the local Prohibition and Evangelical Association of Loudoun County's annual "Bush Meetings." The building is distinguished by its massive, low-pitched, modified, hipped roof with two gable-roofed roof monitors (or cupolas) along its ridge. The building has a distinctive 8-sided footprint that resembles a rectangle with its corners cut off at an angle. This unconventional shape results in multiple hip ridges running from the main roof ridge to the building's corners. The building's frame walls are clad in wood German siding and feature corner boards. The building sits atop a coursed-rubble stone foundation, which is raised approximately four feet above ground along the eastern wall. A series of four, 9-light casement windows open along the building's east elevation; each window features a single wood shutter mounted on metal strap hinges.

December 2005: This 2½-story, stuccoed, frame, four-square dwelling displays modest Craftsman detailing. The house features a pyramidal roof with overhanging eaves, a full-width front porch, and a centered dormer with a hipped roof. The first floor incorporates a wood door and a tripartite window opening that holds an 8-over-1, double-hung, wood sash window flanked by 4-over-1 windows. Paired, 6-over-1, wood sash windows occupy the two window openings on the second floor, and the dormer features two 6-light, wood windows. The three columns that support the porch are asymmetrically placed and are composed of square, tapered wood columns resting on masonry bases.

8. Summary Statement of Significance

Purcellville is locally significant for its collection of historic buildings and structures that illustrate architectural and historical trends from circa 1830 to 1957 in Loudoun County, Virginia. The historic district, which encompasses 293 acres within the corporate limits of the town, maintains a diverse mix of residential, commercial, religious, institutional, and industrial properties that reflect architectural and building traditions and aesthetic trends that were characteristic of rural and small-town Virginia from 1830 to 1957 (Criterion C). The town is historically significant for its role as the commercial center of western Loudoun County in the 20th century. The town and its buildings show how a small, early-19th-century crossroads settlement developed into a thriving town serving farmers in Loudoun's prosperous agrarian region. Purcellville's history reflects local and regional trends during its period of significance; its growth was intimately linked to transportation developments in the 19th and 20th centuries and to municipal improvements in the early 20th century (Criterion A).

The town of Purcellville originated with a late-18th-century store and ordinary established at a crossroads near the foothills of the Blue Ridge Mountains. In 1835, the opening of the Leesburg and Snicker's Gap Turnpike brought additional traffic and new commercial growth to the small crossroads settlement, which was situated midway on the route that connected the burgeoning agricultural areas of the Shenandoah Valley to markets in the east. In 1874, the Washington and Ohio Railroad (later reorganized as the Washington and Old Dominion Railroad – the W&OD) arrived, adding direct rail service to Purcellville's transportation network and creating explosive growth. By 1920, Purcellville eclipsed neighboring towns to become the commercial center of western Loudoun and second only to Leesburg, the county seat, in total population. It did so by embracing early-20th-century municipal innovations, including owning its own dedicated water supply, instituting a town-wide building code, and improving local roads for use by motor vehicles.

Seventy-two percent of the 466 properties included in the district contain main buildings that contribute to its historic and architectural significance. All told, the district encompasses 835 main and secondary buildings; of these 480 contribute. The majority of the 352 non-contributing buildings are outbuildings or other secondary resources. In addition to buildings, the district includes eight contributing and eleven non-contributing structures.

Historical Background

1740-1820

Purcellville lies in western Loudoun County, an area that was first settled by Europeans in the mid-18th century. In the early 1740s, the earliest land grants in what would later become Purcellville were issued to several grantees including Edmund Sands, John Mead, and Mahlon Kirkbride.¹ By the 1750s, a variety of ethnic groups, including English members of the Society of Friends or Quakers,² German and Scotch-Irish settlers from Pennsylvania, New Jersey, and New York, and descendents of English settlers from the Tidewater region of the Virginia colony were settling in the foothills of the Blue Ridge Mountains in what was then western Fairfax County. By far, Quakers were the largest group of early settlers. They first settled in the vicinity of present-day Waterford in the 1730s. Other Quaker groups later moved southwestward to settle unclaimed lands between the North and Beaverdam forks of Goose Creek in the vicinity of present-day Lincoln and Purcellville. In 1757, partly in response to the growing population, Loudoun County was formed from Fairfax County, its neighbor to the east. In 1758, the Virginia Assembly established the town of Leesburg on the eastern side of the county to serve as the county seat.

In 1763, settlement in the Blue Ridge and other western lands accelerated after the British were victorious in the Seven Years' War with the French for control of North America. In 1764, James and Rebekah Doane Dillon of Bucks County, Pennsylvania purchased 1,050 acres of John Mead's original land grant. Most of what is now Purcellville is located on the land that the Dillons purchased. One-third of Purcellville lies on lands settled by Mahlon Kirkbridge's grandsons, Stacy and Mahlon Taylor, who inherited the land in 1774.

Between 1759 and 1770, in order to facilitate travel to the Loudoun County courthouse, residents of the western region of Loudoun built roads that connected them to Leesburg. These east-west travel routes served as the central arteries of transportation and trade within the county and to points east and west. The road that led east-to-west through the Dillons' lands was referred to as "the Great Road." It connected the county seat at Leesburg to Williams' Gap (later named Snicker's Gap) in the Blue Ridge. Near the center of present-day Purcellville, the Great Road intersected with another route that led north to Hough's Mill (present-day Hillsboro). With American victory in the Revolutionary War (1775-1781) and Great Britain's ceding of land west of the Appalachian Mountains to the newly formed United States, travel from east to west

Continuation Sheet

Purcellville Historic District
Loudoun County, Virginia

Section 8 Page 119

greatly increased as thousands of Americans began to travel across the mountains in search of cheap land and better economic opportunities.

Between 1790 and 1801, a small collection of residences and commercial establishments emerged at the crossroad. By 1790, Stacy Taylor had built a house on the Great Road; by 1795, Loudoun County had appointed his brother Mahlon to be the road's overseer. By 1799, Abraham Vickers and his wife Sarah were operating a store and ordinary on land leased from Moses Dillon, the grandson of James and Rebecca Dillon.³ The Vickerses located their establishment near the intersection of the Great Road and the Hillsboro Road (present day Route 690) near what is now the center of Purcellville.⁴ In 1801, Dr. James Heaton (Heaton was western Loudoun County's first physician, the leader of supporters of Jeffersonian Democrats in the region, and one of the Loudoun's most prominent citizens) bought land and a frame building just south of the Great Road from Stacy Taylor to establish his farm. That same year, Stacy Taylor opened Purcellville's second ordinary.

Ordinaries were the hotels of their day. They provided lodging, food, and alcohol for travelers and a gathering place for local residents to meet and hear the latest news. One writer, using data gathered from Loudoun County court records from the early 19th century, calculated that: "guests of the Vickerses and Taylors paid about 26 cents for breakfast or supper, and 36 cents for "Hot dinner with Cyder of [sic] Beer;" "Lodging in clean sheets,' ... cost 12 cents and 'Stableage and hay for twenty four hours' set you back 28 cents."⁵ The presence of two ordinaries made the crossroads a local gathering place, setting the stage for the development of the town of Purcellville.

1820-1860

Purcellville obtained its name from Valentine Purcell, its first postmaster, who started a general store sometime in the 1820s.⁶ By 1836, gazetteer Joseph Martin listed "Purcell's Store" as a post office village located 41 miles northwest of Washington, DC.⁷ Transportation improvements contributed to Purcellville's growth in the first quarter of the 19th century. Martin wrote of Purcell's Store the year after the Leesburg and Snicker's Gap Turnpike (what is now Virginia Route 7; also known locally in the 19th century as Leesburg Pike) opened, passing directly by Purcell's Store. The turnpike quickly became the major east-west route for commercial traffic through Loudoun County. Maintenance of the new turnpike was good enough to allow for greatly increased stage travel in Loudoun County. By the 1840s, Thomas J. Noland was running

Loudoun County, Virginia

Section 8 Page 120

a mail and passenger stage service from Washington, DC to Winchester that stopped at Purcell's Store en route.⁸ By 1860, patrons could take a stage line based in Purcellville to various train lines located in larger towns, including Winchester to the west; Berlin (later renamed Brunswick), Maryland to the north; and Leesburg and Alexandria, Virginia and Georgetown and Washington, DC to the east.

1860-1910

Beginning in 1861, travel and all other social and economic activity in northwestern Virginia was disrupted by the advent of the American Civil War (1861-1865). During the conflict, skirmishing between Union and Confederate troops took place near to but not within the present day boundaries of Purcellville; however, both armies successively occupied Loudoun County throughout the war years. Both armies destroyed or confiscated residents' foodstuffs, livestock, and personal property in order to support their troops or to ensure that the supplies did not benefit enemy forces.⁹ Though Purcellville and western Loudoun did not extensively rely on slave labor of African Americans, the political economy of the area was profoundly changed with the 1865 passage of the 13th Amendment to the U.S. Constitution that banned slavery throughout the United States.¹⁰

In contrast to areas where heavy fighting took place, significant economic activity returned to Loudoun County relatively quickly after the war's end and western Loudoun farms quickly recommenced wheat and dairy production. By 1867, daily train service between Alexandria and Leesburg resumed. From Leesburg, one could take a stage coach to Purcellville or continue west to Winchester or Capon Springs, West Virginia.¹¹ Train service to Purcellville arrived in March 1874, when the Washington and Ohio Railroad, later operating as the Washington and Old Dominion (W&OD), extended its line from Alexandria another three miles west from Hamilton to Purcellville.¹² The goods that were shipped from Purcellville on the train indicate the town's role in the local agricultural economy. In May 1874, a local newspaper noted that the following loads were shipped from Purcellville: "8576 bus. of wheat; 110 bus. of potatoes; 37 bales of hay; 116 calves; 64 barrels of eggs; 3 barrels of brandy; 2 barrels of wine. In addition quantities of butter, lard, cider, vinegar, chickens and geese were 'sent off.'"¹³

The advent of the train service, in conjunction with its crossroads location, accelerated Purcellville's transformation from a small crossroads village to a full-fledged town. By the 1880s, visitors to Purcellville would have encountered "two general stores, a boarding house, a number of shops, a

lumber yard, a livery stable and a manufactory of agricultural implements, which makes the “Loudoun plow.”¹⁴ The town also contained a butcher shop, a cattle dealership, a corn and flour mill, and a stove, tin, and sheet iron dealership and attracted enough vacationers from Washington, DC to support at least four separate inns.¹⁵

A significant factor in Purcellville’s economic growth was the opening of the Purcellville National Bank in 1902, the first bank to be established in western Loudoun. Two-thirds of the bank’s investors lived in Purcellville.¹⁶ In addition, just prior to the bank’s opening, two town merchants had begun Purcellville’s first insurance agency.¹⁷ By 1908, the year that Virginia incorporated Purcellville as a town, Loudoun native James W. Head noted that it “has a population of 300, 17 merchants and a national bank.”¹⁸ Purcellville had grown to equal the population of what had, until then, been the significantly larger towns of Round Hill and Hamilton. By 1911, it was the primary center for western Loudoun’s dairy farmers to ship their products to markets as far east as Washington, DC.¹⁹

Improved transportation and Purcellville’s growth as a commercial center also contributed to the town becoming a center for religious and reform activity. Soon after local train service became available, several residents joined together to found the Prohibition and Evangelical Association of Loudoun County (later renamed the Purcellville Chautauqua Association and the Bush Meeting Association) and began the first of what would become an annual Loudoun County event – the week-long “Bush Meetings.”²⁰ The temperance movement in the United States spanned the 19th and continued into the early 20th century. Adherents of the temperance movement in Loudoun and the rest of the country perceived alcohol to be the cause of poverty, crime, violence, and what we now recognize as domestic violence, all of which were issues that Purcellville grappled with as it grew into a commercial center in a rapidly industrializing and connected nation.²¹

1910-1945

Between 1910 and 1940 Purcellville eclipsed its closest neighbors as a center of commerce and population in western Loudoun County. Why this happened is due to several factors. Emulating larger towns, Purcellville was quick to embrace and capitalize on new technology. Purcellville welcomed the appearance of the automobile and struggled to create the infrastructure to support it. In 1911, in addition to “the pike,” (Virginia Route 7) which served as Purcellville’s Main Street, two miles of macadamized (graveled) roads was laid south of Route 7 throughout the

Loudoun County, Virginia

Section 8 Page 122

southwestern part of town.²² In 1912, Purcellville acquired electricity through the newly organized Loudoun Light and Power Company.²³

In 1914, after two destructive fires ruined portions of downtown, Purcellville continued to grow because its residents, finding the political and economic capital to do so, innovated in the face of adversity. Following the fires, Purcellville's mayor and town council enacted one of Virginia's earliest building codes, ruling that "no building is to be erected within boundary of the business district except same that it be built of stone, brick or concrete with mettle [sic 'metal'] Cornish [sic 'cornice'] and fire proof roof."²⁴ Soon, new buildings constructed of brick and concrete block quickly replaced the frame buildings that lined North 21st Street (formerly Depot Street) that had been destroyed in the 1914 fire. In 1921, the town increased in physical size as well. That year, Purcellville annexed 150 acres of land adjacent to the town on the north side of Route 7, incorporating several houses that were built after 1913 when Purcellville resident J.V. Nichols bought the land.²⁵

In the 1920s, Purcellville continued to invest in improvements. In 1924, the town budgeted to install 58 streetlights along Main Street and North 21st Street. In the mid-1920s, Main Street was paved.²⁶ In early 1928, after another fire burned through a lumber yard and destroyed a neighboring building in Purcellville's industrial district, the town council asked for a special election to be held in order to issue bonds to install a town water system. Within a few months, residents voted overwhelmingly to do so. In 1929, the town purchased 30 acres of land on the Blue Ridge to house the new system; in early 1930 the new water system was operational in time to provide relief for the town (though not the neighboring countryside) during the drought that struck the area in the early 1930s.²⁷

By 1933, Purcellville was a town with a population of nearly 1,000 and boasted a lumber and planing mill, a feed mill, a slaughterhouse, a power and ice plant, a creamery, an apple-packing warehouse, four auto repair shops, a cooper's shop, a woodworking shop, a plumber, two blacksmiths, a mattress factory, a feed store, an automobile showroom, a movie theater, and at least twenty retail shops.²⁸

The Great Depression that followed the 1929 financial crash in the United States profoundly affected Purcellville's residents. Drought conditions in the early 1930s and a decade-long, world economic depression drastically reduced agricultural prices and exacerbated rural labor

Section 8 **Page** 123

shortages as more Americans migrated to the cities in search of work. The federal government attempted to ameliorate these conditions with vast infusions of money for public works programs. Purcellville used money provided by the federal Public Works Administration (PWA) to fund street improvements and, in 1937, build a town library. The profound effects of the depression continued throughout the decade and did not end until the United States entered World War II (1941-1945).

In Purcellville, one of the most significant effects of the economic downturn of the 1930s was the cessation of passenger rail service. Faltering in the face of the rise of the automobile as a means of personal and commercial transportation and facing a drastic decline in passenger revenue during the 1920s and 1930s, the W&OD ceased all rail service on its Bluemont line past Purcellville in 1939. In 1941, the W&OD ceased all passenger service to Loudoun County. Though labor shortages continued during World War II (1941-1945), mobilization for the war drastically slashed unemployment rates and reduced farm surpluses. Loudoun County's income and farm production doubled during the war years.²⁹ In Purcellville, this meant that local merchants and mechanics continued to provide essential goods and services to surrounding farmers. Wartime gasoline and tire rationing forced the railroad to reopen to passengers on a limited basis in 1942, though the train never regained its popularity.³⁰

1945-Present

Following the war, Purcellville continued as the crux of western Loudoun County's agricultural economy even as fewer people in western Loudoun worked and lived on farms. In 1951, the W&OD ended passenger service to Purcellville after it lost its mail contract with the Post Office to commercial truckers.³¹ Despite the loss of rail service as the primary means for shipping goods short distances, Purcellville was able to retain its position as a commercial center due to expanded and improved roads that, by the late 1950s, included interstate highways funded by the federal government. Unlike its growth in the late 19th and early 20th centuries, after World War II, Purcellville's slow expansion in population matched patterns taking place throughout Loudoun and much of the country. Improvements to local roads and the ever-increasing use and affordability of automobiles caused a fundamental shift in the way all Loudouners lived and worked. Though the trend was more dramatic in the eastern part of the county, Purcellville began to witness a new demographic pattern as residents from nearby cities like Washington, DC began to make their homes there and commute to jobs in the region's larger urban areas. By 1970, forty percent of all residents commuted to jobs outside the county.³² Today, Loudoun

County's development in the late 20th-century into a significant work and residential center in Northern Virginia has altered and continues to threaten some of Purcellville's historic building fabric; however, much of its residential, commercial, and industrial areas remains intact and illustrates nearly two centuries of change and continuity.

10. Geographic Data

Verbal Boundary Description

See the attached Purcellville Historic District Boundary Map.

Boundary Justification

The Purcellville Historic District boundary encompasses the central core of 19th- and 20th-century buildings that are associated with the town's initial establishment and development through the first half of the 20th century. The district incorporates the town's densest concentration of 19th- and early-20th-century commercial, institutional, industrial and residential buildings. The boundary line follows property lines and street rights-of-way and was drawn to avoid areas that were developed later or were extensively changed in the latter half of the 20th century. These areas include most of the 500 block of East Main Street, and the 600 to 700 blocks of East Main Street where several late-20th-century shopping centers have dramatically altered the historic streetscape. The boundary also excludes the Courts of St. Francis, an early-21st-century 62-unit residential subdivision constructed between 2005 and 2006 within the super block bounded by East Main Street, South 20th Street, South 12th Street, and East G Street in the town's southeast quadrant. Because of the large number of non-contributing resources encompassed in this new subdivision, the area has been excluded from the historic district.
